

830-A-121-THR

PCB connector for SMD

Push-In connection vertical to PCB

PCB Layout (Recommendation)

L = (No. of poles) x pitch

L1 = (No. of poles - 1) x pitch

Solder paste thickness: 0,15 - 0,2 mm

solder pad, outside diameter: \varnothing 1,9 mm

* = Both solder pads of each pole can be connected together.

The PCB terminal block 830-A-121-THR with the pitch of 3,5 mm offers strong performance in the smallest space. It is available in 2- and 3-pole design.

The position of the entries vertical to the printed circuit board enables the advantageous application within housings with external connection. Due to the very small space requirement and the white colour it is ideally suited to various applications in the lighting industry.

The front of the terminal is equipped with pushers to be handled with standard screwdrivers for the removal of the parallel connected conductors.

The easy to use spring system allows beside the use of 1 mm² solid wires also the connection of 0,75 mm² flexible by use of the pushers.

The advanced design of this high temperature resistant terminal allows in the area of the solder pins the free circulation of hot air in the convection oven during the reflow soldering process.
